any deleterious clinical effects, despite the variety of metabolic changes that have been demonstrated in laboratory experiments. On the basis of the findings in this pilot study, further investigation of clinical effects of pulsed magnetic fields in OA is warranted.

ACKNOWLEDGMENT
We acknowledge Dr. Robert Lehman and colleagues (Department of Radiology St. Mary’s Hospital), for radiographic interpretation; Thomas Papachristou M.S. SM (AAM) for laboratory assistance; Melissa Gerhardt, Jodi L. Haugen and Cheryl L. DeLisle for technical assistance.
